Abstract
The creation of the vocational baccalauréat track in 1985 contributed to a main innovation in the French initial secondary education system. In its objective and in its innovative way of learning combining sandwich courses (work and school places learning), this program offer students who were at school in a failure situation a path for continuing their studies or a springboard to jump into a new career or professional plan. This diploma has been implemented in different ways: through student status or in apprenticeships, and through the responsibility of the Ministry of Education in vocational high schools but also, under the responsibility of the Ministry of Agriculture like in the Maisons Familiales Rurales (MFR).

First, this paper will present the institutional framework: what is the Vocational Baccalauréat (VETBac) diploma, its roles and purposes? And as the national French system of education from the Ministry of education has been the subjects of number of articles in European VET reviews (Gendron, 2005), it will be presented more in details the MFR system less known and its philosophy. The second part, briefly developed here, will give some views of the convergence and divergence of the conditions of competence development of vocational baccalauréat trainees or students with a workplace learning focus in those two previous organizations.

Key words: vocational education and training, competencies development, apprenticeship, workplace learning.

Mots clés: formation professionnelle, développement des compétences, apprentissage, entreprise apprenante.
1. Introduction

The creation of the vocational baccalauréat track in 1985 contributed to a main innovation in the French initial secondary education system. In its objective and in its innovative way of learning combining sandwich courses (work and school places learning), this program offers students who were at school in a failure situation a path for continuing their studies or a springboard to jump into a new career or professional plan. This diploma has been implemented in different ways: through student status or in apprenticeships, and through the responsibility of the Ministry of Education in vocational high schools but also, under the responsibility of the Ministry of Agriculture like in the Maisons Familiales Rurales (MFR).

First, this paper will present the institutional framework: what is the Vocational Baccalauréat (VETBac) diploma, its roles and purposes? And as the national French system of education from the Ministry of education has been the subjects of number of articles in European VET reviews (Gendron, 2005), it will be presented more in details the MFR system less known and its philosophy. The second part, briefly developed here, will give some views of the convergence and divergence of the conditions of competence development of vocational baccalauréat trainees or students with a workplace learning focus in those two previous organizations.

2. Framework: the Vocational Baccalauréat diploma in France, its purpose, organization and its implementation in Vocational Lycées and in the MFRs

2.1 The vocational baccalauréat diploma

A new level of diploma

This “new” diploma at level IV (fig. 1, Gendron, 2005) of vocational Baccalauréat was created in 1985. The purpose was to promote and revalue vocational education in schools now called vocational lycées and thereby to allow students in such schools to be recognised as ‘bacheliers’, a dignified title before only given to general and technical education schools students. The desire to make education more democratic was marked by Ministry of Education objectives in the Guidance 1989 Law which stated that the ‘Nation wants to lead 80% of a typical age group to the baccalauréat level’. Such an objective implied that technical and vocational education should take part in this national effort: the proportion of CAP and BEP holders wishing to pursue their studies and not enter working life was only 20%. The revision of vocational education happened also at level V through the creation of technical classes at the fourth and fifth grade. In addition, the BEP was revised, which now prepares up to the VETBac level.

A pluralistic objective of VET baccalauréat

The VETBac diploma was created the context of a crisis in youth employment and in important structural changes in production and labor organization implying new training and qualifications. Its goals were plural. The first was to respond to the growing demand from businesses for highly qualified production and maintenance workers with qualifications between those of advanced technicians, who hold an advanced technical certificate (BTS) or technological university diploma (DUT), and qualified workers who hold a CAP or BEP. A second objective was to respond to the development of new maintenance techniques for personal electronic and computer equipment. Moreover, its creation was also to boost vocational education and to enhance cooperation and the relationship between business and schools through the compulsory internship period. They were created in close collaboration

---

1 The purpose of the paper is to give to the Inap conference audience the framework of the French system in order to focus our talk during the presentation more on concrete experience of innovative apprenticeships than in institutional or legal points.
with employers in the aim to train the VET attendees for specific skills for the labor market needs. They differ from technological *baccalauréats* as they are targeted at specific occupations, whereas the technological *baccalauréats* are broader in scope (electronics, mechanics, etc.).

**Vocational Baccalauréat principles**

VETBac training lasts two years (there are recently experimentation for preparing the diploma in three years directly from secondary school) and constitutes the final cycle in the vocational route (first and terminal vocational classes). Unlike the technological *baccalauréat*, the VETBac is primarily a vocational certificate leading directly to an occupation; although its diploma also entitles holders to enter university studies. The VETBac provides qualifying training for a particular occupation and admits candidates holding a BEP (or a CAP prepared in two years after the third class) corresponding to the VETBac concerned.
2.2 The “Maisons Familiales Rurales”: Genesis and Evolution

The first MFR was born in the south west of France in 1937 when a farmer wanted to that one of his children to go further education after his “certificat d’études” (first diploma of the French education system at that time). This visionary farmer, leader of the local professional organization with other interested parents, supported by the parish priest militating for the rural cause, were convinced that to be a successful farmer, it was necessary to acquire more knowledge theoretical and technical. In order to allow their children to get further education and a global approach to the rural area, they decided to buy a house naturally called Maison Familiale (family house) and recruited a technician in order to do the young people's training... and to give advice to the parents farmers as well. In 1941 the MFRs chose the status of Association (according to the “French 1901 law”) to be able to act quite freely. The same year they created the Union nationale des MFR (National Union for the MFR).

The MFRs are non profit organizations focus on vocational training programs under the responsibility of the Ministry of Agriculture. Nowadays, the organization consists of about 460 associations together in France and developed a world Federation in 1975. They are provided with the means (staff and premises) from the State, the territorial structures and various partners (associations, non-profit organizations, professional partners...) in order to set up training and development schemes which are based on essential principles: - families’ responsibility in the management of the Association and in its choices (which type of training to set up, which people concerned, which financial means ?) ; - a general training combined with a professional training in relation to real life situations through an alternate training system (apprenticeship, sandwich courses…); - a global approach to education; - the involvement of the young people and adults from the MFR in the development of the area where it is set up with the very close cooperation of all local partners. A MFR works on shared principles (individual and collective responsibility, involvement of the individuals and the communities, implementation of alternate training system and actions of development).
3. The role of different stakeholders at designing conditions for competence development

3.1 Origin of the research, data, methodology and data collection
The research on VETbac of the Vocational Lycée was part of a European Leonardo Project “Social representations of VET” (Gendron, 2005). Its aim was to depict how VET is perceived by the different stake-holders. I explored their implementation and functioning. Six vocational lycées from Low-Normandy were investigated and 60 people were interviewed (the data were analyzed through a qualitative methodology (focus group) and quantitative and qualitative textual data analyses). The data from the VETbac of the MFR are from a case-study from a MFR in the Midi Pyrénées (Moissac) and the experience reported by the trainers, the director and administrator of the MFR of Moissac. This center has about 140 students (among them 20 VETBac trainees). In this case-study will be analysed the VETBac “Commerce” set up in 2001 in Moissac.

3.2 Divergence and Convergence
The two systems (Maisons Familiales Rurales from the Ministry of Agriculture and Vocational Lycée from the Ministry of Education) prepare to the same Vocational Baccalauréat diploma. But regarding the innovative conditions of the competence development through workplace learning, they can differ.

Convergence:
- Same national diploma, Two years of training
- The public: the trainees are between 18 /19 year olds. They are older than the regular general Baccalauréat trainees because mainly of them have experienced failure situations or schooling difficulties.
- Sandwich courses: periods of times at school and others in enterprises; Compulsory period of training in companies
- All companies have tutor (person in charge of the trainees in the company)
- Companies involved in the trainee and training assessments
Innovative and motivated trainers staff focus not only on professional development but also on personal development: developing socio-emotional competencies, assessing and favoring “savoir-être” and rebuilding “hurt people” toward success: Réussir Autrement

Divergence:
- People trained in the Lycée have a student status versus a work contract with a company (they are “workers”); those latter are called “apprentis”;
- A different philosophy regarding its institutional organization: a public organization versus an association of families. The MFR structure implies a certain number of rules. Families are involved and vote for their members in the board of directors. The boards of directors meet regularly in order to ensure a smooth running of the association. Their main preoccupations are about employing and supporting the "moniteurs" (trainers) management, looking for solutions regarding education training and the development of the area. Regular meetings with all the actors and take-holders of the MFR (families, trainers, trainees, tutors from companies...) are the opportunities to analyze the results of the actions started, to decide new actions and fix problems….
- Trainers staff: civil servant – teachers vs private contract –trainers- or moniteur; This difference of title is not only on the status but on the philosophy and the art of the job. The teachers are civil servants and teach a certain number of hours per week which are planned in the beginning of the academic year. In MFR, the trainers stay all day long at the MFR center. They were named “monitor” as they have various functions: they guide, animate, help, teach... They favor relationships in the group, they teach, they take an active part in the education aim while supporting each youngster's project. They are qualified to implement the alternate training system and they know very well the MFR's environment,
youngsters, their families and the training managers and company tutors. They get involved in the development of the economic area activities where the MFR are located.

- This way of working relates to the different pattern of “alternance”. The importance given to the training organisation between « school » and « work » periods varies according the nature of the “alternance” pattern (sandwich courses organizations) and determines its modes of organization.

Diversity of the « alternance » patterns (sandwich courses organization): juxtapositionive learning system versus integrative learning system:

- If in a Lycée perspective, the Vocational lycée are innovative regarding the way sandwich courses are organized and built with companies compared with technical lycées. But nevertheless, they also differ from the MFR, and already from the agenda.

- Sandwich training courses: In the VET Lycée, the periods on the job-training can be organized according the school but mainly at the end of the academic year. During the 2-year program, trainees have 16 weeks of company-training. In the MFR, the agenda is organized in “sessions” sharing training program between two periods of time: a period of work in a company (3 weeks) and a period of study at the MFR center (1 week).

- In a perspective of effective sandwich education, the VETbac sandwich courses organization organized in Lycée remains “juxtapositionive” versus “integrative in MFR. Thus, they could be seen as traditional and less innovative. The reason is that in vocational lycée, the sandwich courses are organized according two places and agenda (school and companies) i.e successions of durations and places. Each place and time has their own logic and objectives which might not be necessary linked together. Indeed, the link between the stake-holders can be only institutional but not organizational neither operational. The trainee will have to make the bridges and links between his or her on-the-job-training knowledge and the knowledge provides at school. The trainee difficulties can be this break between the two kinds of knowledge. In some case, the sandwich courses were conceived as a time of socialization, or a first approach of the job reality without a real supervision or without a combined learning experience (school & work). They are only juxtaposition of knowledge, times and places. In such situation, academic knowledge remains predominant and the logic of the training is more focus on certification (diploma oriented) than on professionalization.

- For the MFRs, according their original philosophy, the work situation is at the core of the training system and process. The pattern of “alternance” is seen as an integrative learning system combining work and school learning experience all connected. The knowledge acquired during the period of in-the-job-training is used at the training center as the starting point of knowledge building (except for “traditional academic matters: math…”). This integrative system obliges to coordinate and organized the different periods of training in a collaborative way with all stake-holders. This kind of training program is hard to implement and explain the trainer staff agenda. They all work full time and stay during the all day at the training center. For instance, as the agenda is organized according the company needs, the agenda is weekly organized and reorganized. The integrative pattern is based on the principle that knowledge whatever its sources (from ground experience, from the job situation …) is valuable and has to be connected with all knowledge in its all. Above all, those experiential learning start in the job situation and are the opportunities to reflect on it and to transform this experience in knowledge. To allow such knowledge building, the MFR has implemented a “Plan d’études”. This tool is a set of questions prepared before each companies training periods. Trainees during this period, beyond their professional task in the company have to raise those questions to their tutor to know more about the work, the company and its environment. Back to school trainees discuss this
material with their trainers and shared with their peers and then, this material is used as the starting point for a lesson. When some important elements are missing, some extra information are added in the lesson by the trainer. This organization and role of the work knowledge shape different trainees/trainers relationships. Trainers not only train but animate the material given by trainees, they guide trainees’ reflection, they manage the links between companies, visit trainees at the workplace and work with the company tutors. Therefore, the link between traditional trainer/trainee is modified toward a relation of accompaniment between the various places of formation and the types of knowledge, each one finding its own prolongation and use in the other.

4. Conclusion

Those VETbac programs have taken different shapes but whatever the shape it plays an important role and different roles for the young people enrolled. Those VETBac trainees seem to benefit from a longer period of schooling and the new way to learn focus on workplace learning and its organization in sandwich courses. Moreover, whatever the institution, all trainers staff were motivated and felt invested of a mission: to rebuild those trainees self-esteem to help them at rediscovering the way to succeed. To do so, trainers innovate in a different way. But it came out that beyond the divergence, the convergence was at designing the innovative conditions to develop competencies by using the workplace as a motivating source of learning, underlining the crucial role of on-the-job training as a key factor of competence development and accomplishment. Precisely, the development of socio-emotional competencies (Oecd-Delsa 2002): autonomy, adaptability, self-confidence, conflict management, catalysing changes, teamwork competencies…, those emotional competencies essential to perform his or her job nowadays were a major clues and key competencies base for trainers in their training whereas they are neglected in traditional and general school system. Those results regarding the competencies developed could be analysed through the conceptual model of Emotional Capital1 (Gendron, 2004).
