THE INTRA-URBAN BURIAL INSIDE GREEK POLEIS IN ASIA MINOR

The example of Termessos*

Abstract

The phenomenon ‘intra-urban burial’ in Greek influenced Asia Minor can at first be grasped with the extraordinary Maussolleion at Halikarnassos. With this exception Maussollos formed his image in choosing by himself the site of his grave, a big part of the cult rites and the architecture, in which he joined Greek and oriental elements. The development of grave sites, cult rites and architecture forms for instance of the late-classical graves of Termessos or Ephesos will be analysed in succession of Maussollos. During Hellenistic times euergetism played a big role inside micro-Asiatic cities, and the intra-urban grave was part of the honours from the polis to the benefactor. The special meaning of this cult place honoured a couple of centuries in the middle of a city can be recognized by detailed and copiousness inscriptions, for example of the burials of the euergetai at Kyme. During the time after establishing the Roman province Asia and during the Roman Empire in the East the intra-urban burial was anew a special honouring given by the polis, but the importance in relation to the creation of identity for the city changed. On the basis of a selection of intra-urban graves from the 1st and 2nd century AD the way how to deal with these burials within the poleis, their creation of identity of the city and the way of self-imaging of the deceased will be examined.

* I wish to thank Mr. Olivier Henry for inviting me to and for the splendid organization of the conference at the IFEA resp. Cezayir House. Also thanks to Anne Marie Carstens, Alexander Herda, Oliver Hülden, Martin Seyer and Martin Steskal for discussion. A special gratitude goes to Tina McGeorge, who read my article in a former version to prevent me from linguistic mistakes. This paper is going back to aspects of my doctoral thesis submitted 2000 in the Friedrich-Schiller-University of Jena, Germany, with the title “ΕΝΤΑΦΗ ΚΑΤΑ ΠΟΛΙΝ: Untersuchungen zum Phänomen der intraurbanen Bestattungen bei den Griechen”.

In this research I wanted to examine all archaeological, epigraphical and literary sources of intraurban graves and burials within ancient Greek cities – except for Lycia and Caria – from the end of the 8th century BC to the beginning of the 3rd century AD, which had come to my knowledge. Only graves and burials, which are archaeological excavated or written down in a literally or epigraphically source with a clear-cut testimony were collected, but not monuments of mythically heroes. – This article follows the regulations of l’Année philologique.
Introduction to the topic of Greek intra-urban graves

At the end of the 8th century BC one can observe an interesting new phenomenon within the Greek colonized region: a clear distinction between the city of the living (πόλις) and the city of the dead (νεκρόπολις) was customary for most of the following millennium. From that point in time, it is possible to recognize the beginning of the Greek polis, or city-state, as a uniform political, social and religious system.

After that date, necropoleis at Greek cities are located close to but isolated from the settlement, first as a naturally evolving, unarranged group of graves, later in rows along the streets leading out of the city. The usual form of a burial there was the family grave, which could be visited by the family members of the deceased; it was the place for the cult of the beloved dead, securing the veneration and the remembrance of the deceased for a long time. But in early Archaic times, it is also noticeable that single interments or small groups of burials are placed intentionally within the city, first of all on the mainland Greece and afterwards all over the Greek influenced Mediterranean basin, for example very near of the West gate at Eretria on the island of Euboea, on the agora of Cyrene in North Africa or at the agora and close to the theatre of Mantineia (Arcadia), burial of Podares at the agora: Schörner 2007a, 213-216 Cat. A 3 figs. 15-23; Kenzler 1999, 171-172. 191-192. Mantineia (Arcadia), burial of king Battos at the agora: Schörner 2007a, 209-212 Cat. A 1 figs. 1-8; Blandin 2010, 263-265. Kyrene (North Africa), burial of king Battos at the agora: Schörner 2007a, 215-216 Cat. A 1 figs. 15-23; Kenzler 1999, 171-172. 191-192. Mantinea (Arcadia), burial of Podares at the agora: Schörner 2007a, 216-218 Cat. A 4 figs. 14-27; Fouquéres 1890, 255-256 pl. i. XVII.

In this contribution I want to examine the grave building at the agora of Termessos in Pisidia as a case study for burials within the city in late Classical and early Hellenistic time in ancient Anatolia.

Termessos, grave building at the agora

In Pisidia, within the city of Termessos, a quite unusual monument is located on the South side of the agora and in the West of the upper Gymnasium (fig. 1). It was mainly cut out of the same local limestone as the buildings of the whole city (figs. 2-3). The traces of the moil chisel can be seen all over the monument and also inside the three niches on the West side (fig. 5). A flight of steps leads from the North to a platform, which is covered with flat limestone slabs and limited on the South with a semi-circled bench (fig. 4). Behind it the cut rock towers up, and in the middle of it lies the area for the funeral, East-West oriented, a cassa perfectly hollowed in the rock (figs. 2-3). The round shaped lid – the outer side convex, the inner concave – has fallen down to the South of the monument, broken into two pieces. If there had ever existed an architectural ornamentation it is not preserved.

No grave or votive offerings are preserved, although it is clear, that the three niches in the West wall were made for the deposition of objects of veneration (fig. 5). Also platform and bench had certainly served for congregations, cultic activities and remembrance of the deceased person (fig. 4). On the left side of the niches, a small canal can be seen. It begins within a little basin, is deflected downwards towards the ground, but the end is hard to see because of the vegetation (figs. 5-6).

---

1 For the following basis information compare Schörner 2007a, 1-19 and 2007b, 134-144.
4 Schörner 2007a, 220-222 Cat. A 6 figs. 34-36 for the earlier references and the detailed measurements. A sufficient description and adequate publication of that grave building unfortunately doesn’t exist so far. But compare for the older researches Çelgin 1994, 160. For the history of researches see İplikçioglu 1993, 255-256. 
5 For site and localisation: Lanckoronski 1892, plan after p. 20. The earliest known building on the agora is the Stoa of Attalos II, demonstrated by an inscription: Lanckoronski 1892, plan after p. 20, here fig. 1 (L 1). 38-39.
6 Heberdey 1934, 735-736 fig. 1 (map of the city, M: grave at the agora); Lanckoronski 1892, 36-37. - Date of the visit of the author at Termessos: 08-23-2002, at that time the photographs were produced.
7 Lanckoronski (1892, 37) mentioned pieces of Ionia ornamentation around the three niches on the West side, but nothing of it can be seen today.
The intra-urban burial inside Greek Poleis in Asia Minor

Fig. 2: Termessos, grave, view from West (photo author, 23.08.2002).

Fig. 3: Termessos, grave, view from South-West (photo author, 23.08.2002).

Fig. 4: Termessos, grave, view of platform with bench and cassa (photo author, 23.08.2002).

Fig. 5: Termessos, grave, West side, view to niches, basin and canal left of the niches (photo author, 23.08.2002).
This was certainly a construction for liquid offerings (libations).

On the south west side of the monument, an inscription is cut into the rock (figs. 7-9):

**ΘΟΑΣ ΚΕΝΔΕΩ[Υ] ΟΒΡΙ[ΜΟΤΟΥ]**

Thoas, son of Kendeas, grandson of Obrimotes.

The style of writing is unequal, not upon one line. Theta is the biggest letter with a height of 30 cm, the other letters are about 18 cm high, which makes an emphasizing of Thoas most likely. Unfortunately, one Thoas, son of Kendeas and grandson of Obrimotes remains unknown until today. Rudolf Heberdey and George E. Bean read ‘Thoas and Obrimotes, sons of Kendeas’ but it is implausible because of the writing direction from left to right and because there is sole one cassa only for one deceased person at the peak of the monument.

The dating of the inscription is problematic. The letters with the round shapes are not very helpful, nor the fact that Greek inscriptions prior to the 2nd century BC are unknown to us at Termessos. We know from Arrianus, that Termessos did exist in 333 BC, because Alexander wanted to seize it.
but was unable to do so. The levelling of the agora plateau must belong to the early works of the building project after founding of the settlement because it is not conceivable that such a great block of rock was standing crude for decades or for centuries at one side of the agora. Taking all this into consideration, the unfortunately inadequate published grave at Termessos must belong to the late Classical or early Hellenistic era.

Comparisons in site, architecture and veneration

The location of that tomb within the agora follows most likely Greek, and not Anatolian prototypes for an honoured grave of a very important person of a city\(^\text{14}\). The oldest example for that site is the grave of Heropythos at the agora of Ephesos about 340 BC\(^\text{15}\).

Rock-cut tombs possess a very long, several millennia long lasting tradition in Anatolia. On first sight the tomb on the agora of Termessos in Pisidia looks very unusual, because it doesn't belong to the most common group of the rock-cut façade graves. The architecture, the elements mostly cut out of the rock but some also build up with slabs, seemed to be an Anatolian tradition. Most narrow comparisons one can find in the necropoleis of South-Western Anatolia, with steps leading to a platform, like at the Kaineus grave at Limyra\(^\text{16}\). A platform which forms the place for the veneration before the cassa or sarcophagus is very seldom, one example occurs at Demetrias in Thessalia\(^\text{17}\).

The place of the sepulture at Termessos, the cassa, looks like a ‘chamosorion’ on the top of the edifice. Chamosoria are not uncommon in South-West Asia Minor, for instance they occur in several necropoleis in Caria\(^\text{18}\) or Pisidia\(^\text{19}\). For a cassa deepened in the highest point there are far fewer examples: A rock-cut sarcophagus in the North necropolis at Melli in Pisidia\(^\text{20}\), but secluded from the main cemetery was founded on the highest point of a rock, surrounded by a bench, perhaps for congregations. From the position of the tomb there is an excellent view over the city of Melli. At Beşkardeş in Cappadocia a rock-cut tomb possesses shape and ornament of a Garland sarcophagus\(^\text{21}\). On a free standing block of stone one can see that it is executed on one broad side as a Garland sarcophagus, with two pilasters on the edges, one bucranium in the middle and two bows of garlands; beneath there are three niches like at Termessos, although the niches at Beşkardeş are smaller as in Termessos. On the other side, steps are leading up to the top. On that place the cassa for the burial was hollowed out; the lid is not preserved, but the traces of folds on the edge can be seen. Both rock-cut sarcophagi are younger than the example on the agora of Termessos and date into Roman Imperial Times, the 2\(^\text{nd}\) or 3\(^\text{rd}\) cent. AD.

At Termessos the rock-cut canal or drain (figs. 5-6), which begins within a little basin under the niches is surely a construction for liquid offerings, for libations. Robert Fleischer discovered a comparable cavity at a rock sanctuary, North-West of the city; he named it ‘sanctuary of the peak’\(^\text{22}\). It consists of one niche with the picture of an unidentified god and of a basin in front of it. A canal does not exist. The reason may be that the offering for an Olympic god ought to flow down into a basin, where it remains. The liquid offering for the hero at the agora, however, should be conducted into the ground to ‘feed’ the hero\(^\text{23}\). This group of sanctuaries also belong to the Roman Imperial Times because of the inscriptions there, but the origin might be older. An analogy for libation at a Hellenistic intra-urban grave presents the sarcophagus no. 3 within the Heroon of Kineas at Ai Khanoum, where a hole in the lid and a canal from the floor of the chamber to that lid confirms that kind of cultic veneration\(^\text{24}\). Greek influence is visible chiefly on the inscription in Greek letters. The person Thoas, son of Kendeas and grandson of Obrimotes, had

achieved during his lifetime something brilliant we do not know. Maybe he was a κτιστής, the founder, or a νέος κτιστής, a liberator or re-founder of his home town Termessos, possibly at the siege of the army of Alexander in 333 BC. Whatever the case his achievement provided him this great tomb on the agora of Termessos with the permission of the inhabitants. Unfortunately many questions in reference to the date of that monumental grave remain open, because of the lack of ornamentation, the unclear evidence of the shapes of the letters, or the fact that inhumation into a sarcophagus was practised through the centuries in Hellenistic and Roman Times. Both a Pisidian (Obrimotes) and a Greek (Thoas) personal name are mentioned in the inscription. At first time the name ΟΒΡΙΜΟΤΕΣ is mentioned in an inscription found in the area of the town, which can be dated in the year 278 BC, when the city was under the rule of the Ptolemaioi. Unfortunately this inscription is totally different from the one hewn into the Heroon and the letters are very small, so it cannot give us a chronological comparison.

The Phenomenon of intra-urban graves within the Greek World: a short review

With regard to the burial place within the city, there does not exist a great difference between the examples from mainland Greece and those from the late classical Asia Minor and later. In both cases the agora or another great square were the appreciate places for the intra-urban tomb, respectively along an important street and also at vulnerable points of the polis, such as gates. The architectural form both in Asia Minor and in Mainland Greece is more extensive in comparison to extra-urban graves: tumulus (with an architectural frame) with the grave chamber within or under it, or a common grave house. In late Classical times the grave building can possess an architectural connection with a building of another function, mostly a Gymnasium, in Roman Imperial times also a library. Rarely, and only in Asia Minor, two storeyed grave buildings appear, after the Maussolleon the two octagons at Ephesos and Aphrodisias from Augustan times. One can observe a strong dependence of the conspicuous graves on local style.

The reason for allowing the tomb within the polis is very broad and changed during the centuries: First of all the burial place on the agora was reserved for the κτιστής, the founder of the polis, as maybe the case of the unknown deceased in the agora in Termessos. A Greek colony normally performed periodically their rituals both in the sanctuary of the urban Olympic god and at the tomb of the founder as a deep expression of their common identity. The best example of that is Kyrene in North Africa, where the grave of the founder and king Battos lies not far away from the temple of Apollon. Besides that other personalities could be honoured for their lifetime achievement, such as winners of Olympic Games, authors,

25 According to Cicero, the liberation is equivalent to the founding of a city: Cic. rep. 17.
26 And for a long time inhumation and cremation at the same time: Köse 2005, 81-83, 107-109.
27 The name “Obrimotes” was common in Hellenistic times: compare Çeğin 1997, 116 (inscription from the Gymnasium at the Agora of Termessos), or Mitchell 1994, 95-96 (inscription from the Pisidian chora, 1st cent. BC).
28 Işılkıçlıoğlu 1999, 309 note 2 with the older evidences; Waalkens 2004, 441.

statesmen or generals. At Hellenistic times, the role of benefactors, εὐεργέται, grew in an intense way until about 200 AD.

There does not exist any Greek written source prohibiting burials within the cities. Only for early Archaic Sparta the legislator Lykurgos had allowed it, as Plutarch reports. The reason, he tells us, was that the youth should get accustomed to the sight of burials, because death is not a “Miasma” for these who had touched a dead body or had walked over graves. Miasma in this connection means pollution in a figurative sense.

**Summary**

The Greek intra-urban grave as phenomenon existed on mainland Greece from 720 BC onwards with the formation of the Greek polis. In Asia Minor the oldest grave within the city – except the Maussolleion at Halicarnassus – is indicated with the Pisidian tomb on the agora at Termessos. The Pisidians – non-Greek people of Anatolian origin – had practiced since the 4th century BC a kind of Self-Hellenization. Already under the reign of Antigonos Monophthalmos, in the years after 319 BC, the Termessians minted their own coins. It is conceivable without problems that they assumed also this Greek phenomenon of honouring a prominent citizen with the great privilege of the burial at the city centre. It is quite possible that this citizen was the founder of Termessos and his grave belongs to the second half of the 4th century or the beginning of the 3rd century BC. But last certainty can give us only new researches, or excavations within the city of Termessos, or finds of new inscriptions.
