HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
France, a Country of Immigration and… Emigration

By Gérard-François Dumont

Professor at the University of Paris IV-Sorbonne; President of the journal Population & Avenir.

For this purpose, we will examine the inter-censal period 2006-2013, actually covering census surveys that took place from 2004 to 2015. Over a 7-year period the net migration in France excluding Mayotte, in other words mainland France plus the four overseas departments (Guyane, Guadeloupe, Martinique and the Reunion Island, as well as the French overseas collectivities), is estimated at 405,000 people. This is a net result, the difference between those who came to live in France—the inflows—and those who decided to leave France to go and live in another country—the outflows.

The numbers behind this net result reveal a significant mobility. Indeed, 2,475,000 people came to live in France whereas 2,070,000 went to live abroad.

More inflows than outflows

For this purpose, we will examine the inter-censal period 2006-2013, actually covering census surveys that took place from 2004 to 2015. Over a 7-year period the net migration in France excluding Mayotte, in other words mainland France plus the four overseas departments (Guyane, Guadeloupe, Martinique and the Reunion Island, as well as the French overseas collectivities), is estimated at 405,000 people. This is a net result, the difference between those who came to live in France—the inflows—and those who decided to leave France to go and live in another country—the outflows.

The numbers behind this net result reveal a significant mobility. Indeed, 2,475,000 people came to live in France whereas 2,070,000 went to live abroad.

The positive net migration of immigrants counterbalances…

There are six types of migratory flows, involving three distinct categories of people. The first category concerns people who migrate for residential reasons but who were born in a foreign country and had foreign nationality at birth, according to the French definition of the term immigrant. During the 2006-2013 period, such immigrants represented more than two thirds of all inflows into France, 67.4% precisely, but only a minority of the outflows (25.1%). The in-out balance of immigrants directly contributed to an increase of the population in France of 1,149,000 inhabitants in seven years. This can be explained by the 5 following factors, in decreasing order of importance:

- the first one is the arrival of initial migrants’ families, in particular under the “family reunification” provisions pertaining to article 8 of the European Convention on Human Rights;
- the second one is the humanitarian aspect, such as the possibility of seeking asylum or reception on health grounds;
- the third one is linked to student inflows;
- another, less important, flow is the economic one linked to people who come to France for professional reasons;
- the last, and least, “miscellaneous” flow includes in particular foreign minors.

...the negative migratory flows of people born in France

The migration of people born in France (mostly of French nationality) is the complete opposite of that of immigrants. Indeed, their in-out balance is a negative 845,000 persons. This negative amount shows the low attractiveness of France during the period under review, as it involves many French people who believe that they have a better chance of professional success abroad, and therefore leave the country, as witnessed for example by the presence of several hundred thousand French people in United Kingdom.

The third category of migratory flows is that including people born abroad, or because it is in France that they find opportunities back to their home country after a professional period abroad, or because it is in France that they find opportunities for graduate studies, after having attended, for instance, a French “lycée” abroad. Overall, the picture of French migrations is highly contrasted, as the country attracts foreigners but repels people born in France.
