April 23-27th

S26: Archaeological network research: formal network representation of archaeological theories

MoveScape towards a formal representation of multiple pathway systems

Nuninger Laure - Verhagen Philip - Rodier Xavier
with collab. of R. Opitz and Th. Libourel & MoveScape team

Modelling & Detection of Pathways?

Simulation of potential pathways

Detection of imprint of pathways

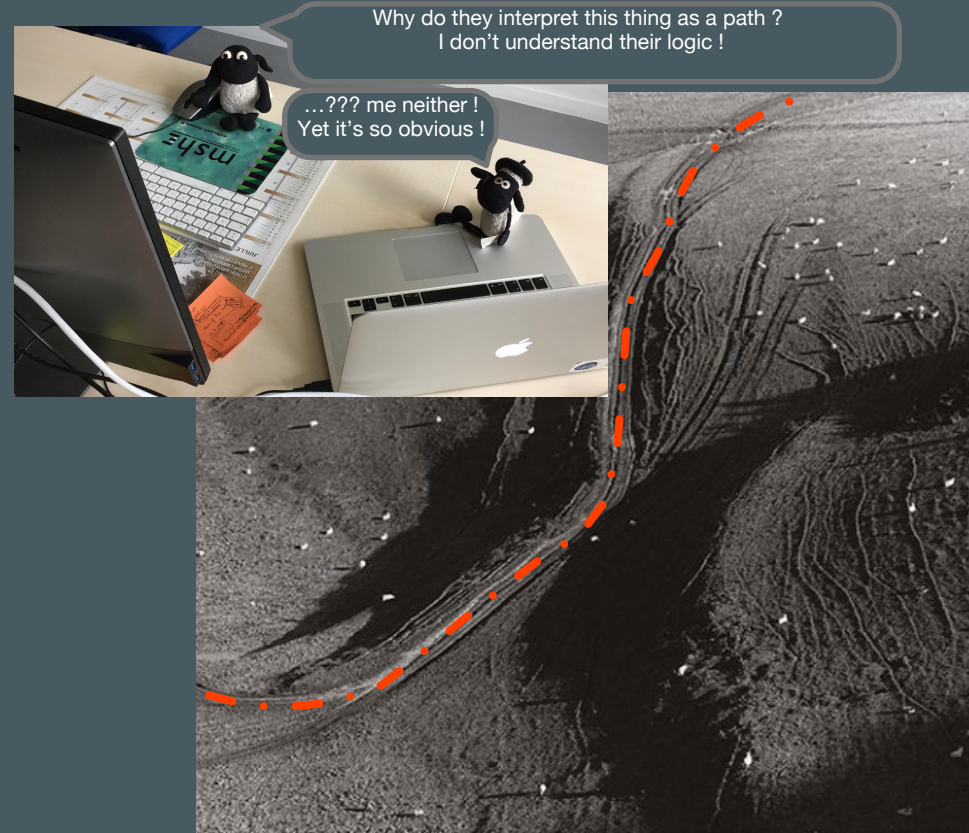

Many pathways and many ways of moving through the landscape

Many actors, many ideas of routes

- Causeways & public spaces network ⇒ "*sachbes*": the most visible part of the transport system - connects elite groups
- Isolated residential groups & agricultural spaces (terraces) ⇒ "*vias*": less visible, intermixed with terraces, connected to main road causeways, connects non-elite groups

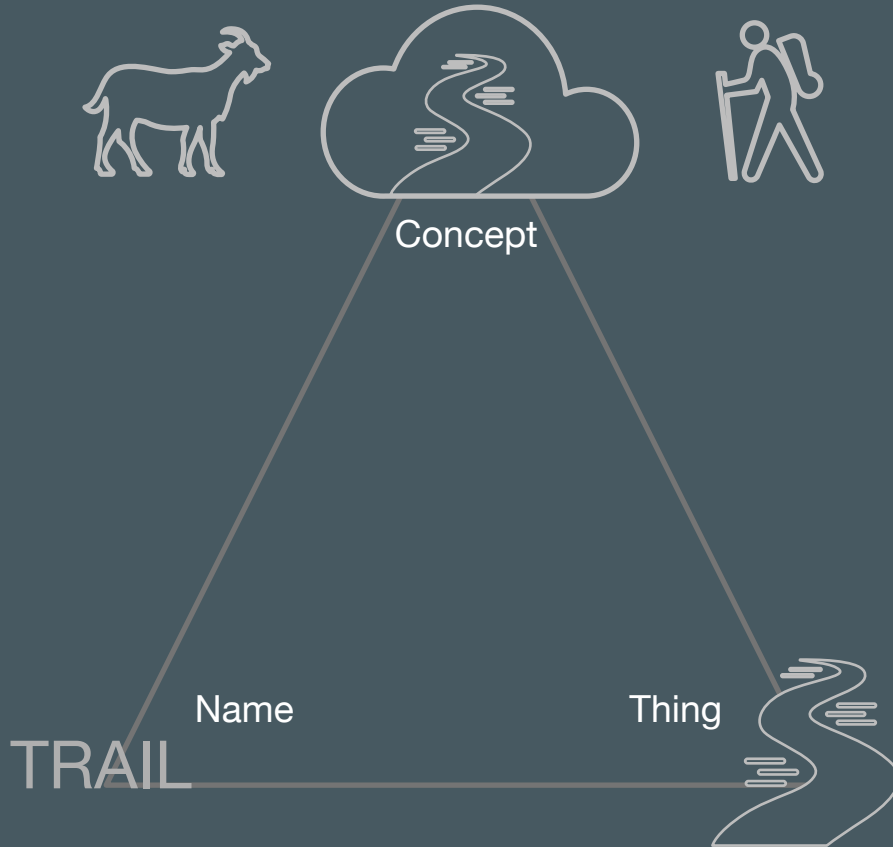

Pathways, Place & Movement: at the crossroad

- A place creates a crossroad
- Paths crossing creates a place
- Paths intersect do not cross - no meaningful place exists here

What are we talking about ? Name, Object & Concept

How do we conceive movement over space ? From path to pathway system

Network

Places are connected by path(s),
or paths connect existing places

Concept

Meshwork

Places are produced by knots of pathways
Pathways entangle, creating places

Ingold 2011
Lefebvre 1974

Existing space
Defined places

versus

Produced space
Emergence of places

Knots

Both conceptions are present in the landscape

Transport network

&

Task meshwork

Murray-Rust, D, Tarte, S, Hartswood, M & Green, O 2015, On Wayfaring in Social Machines. in WWW '15 Companion Proceedings of the 24th International Conference on World Wide Web. ACM, pp. 1143-1148. DOI: 10.1145/2740908.2743971

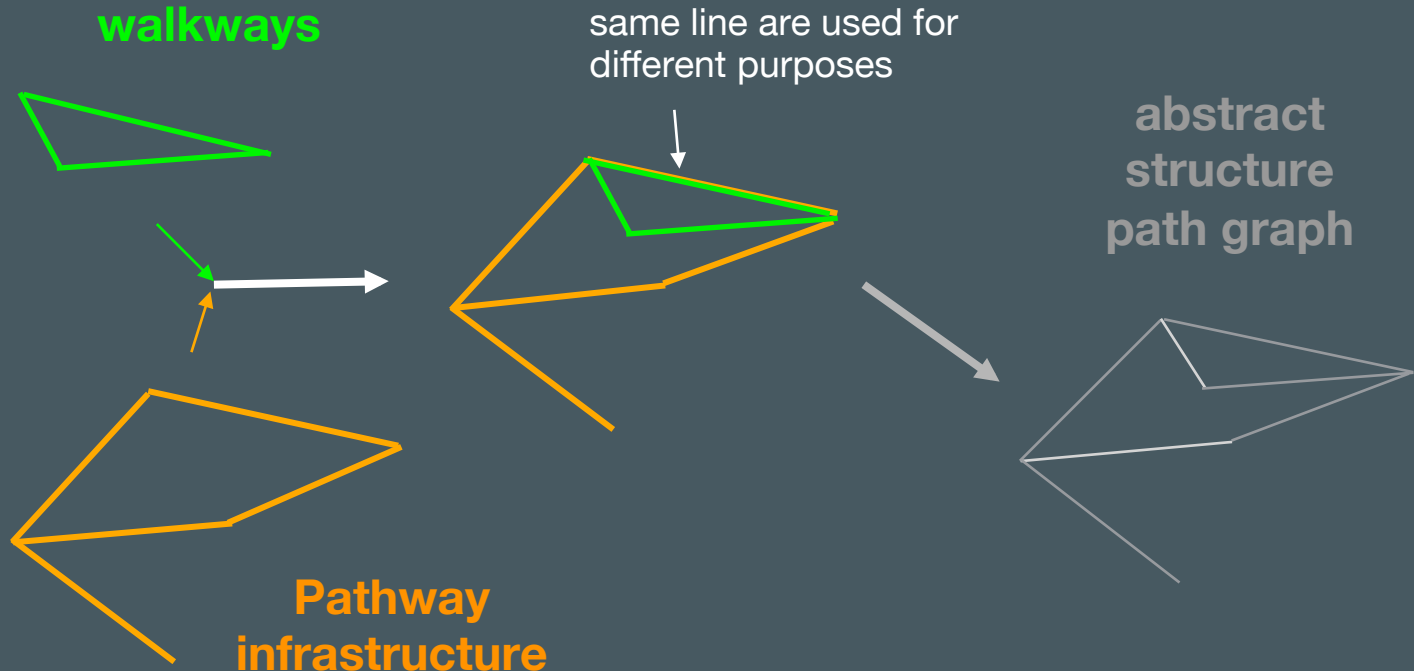

Abstract multiple pathway modes for integrated spatial analysis.

walkways

Pathway
infrastructure

Emerging concept: « path graph »

arrangement
meaning

abstract
structure

Pathways system

Pathway system = designed by usage, behaviour of individuals or groups according to various goal. The pathway system designs a "network" or "meshwork" which can be shared but without a formal framework. It remains mostly implicit and can be multiform
==> agency

« Path Graph »

cumulative - non-hierarchical

Path graph = set of all realized and potentially realized movements within an area. Built by cumulative elements, segments and nodes (not always active as a node)

Path framework
system

« Path framework » system = designed by a society, recognized as such by a group. Formalized and shared as such by the group. It could be materialized by a road, a simple trail or by a series of landscape markers (architecture, remarkable elements...) or by a narrative (without materialized traces)
⇒ society

How can the path graph concept help ?

Crossroad dilemma → Active or Inactive Nodes when used in pathway system or path framework system

Pathway system
⇒ model of reconstruction based on ontology and external spatial knowledge

Conclusion & perspectives

- **formal approach based on graph theory and ontology can help to**
 - **bring together cases from different backgrounds**
 - **explore multiple meanings**
 - **make explicit the set of assumptions used to reconstruct the network**
 - **experiment with emergence and durability**
 - **analyse at different scale levels**
 - **compare pathway systems**

- **but**
 - emerging concepts need to be tested in case studies
 - need experiments with different conceptions and different scale levels
 - tools for building and analysing path graphs needed
 - and ... we need a better name for the path graph
